

DR. LABIB RIACHI

Named Busiest GYN Robotic Surgeon in New Jersey

Intuitive Surgical recently provided a list of robotic surgeons by volume which revealed that Dr. Riachi performed more GYN robotic procedures than any surgeon in the state. The procedures he performs at Trinitas are among the most complex and challenging cases being done today.

At Trinitas, robotic surgery is used for a wide array of GYN procedures, including hysterectomy, removal of fibroids and cysts, correction of vaginal prolapse and pelvic floor disorders, and excision of endometriosis and severe adhesions. The robot's 10x magnification and 3 dimensional viewing allows the surgeon to work with unprecedented precision.

Dr. Riachi's use of robotic surgery – with its greater precision, quicker heal rates and reduced surgical trauma – reflects his commitment to his patients.

Congratulations Dr. Riachi and the Trinitas Robotic Surgical Team!
